FLASK BASED TO-DO WEB APPLICATION

March 24, 2026 (Piyush Patil)

OVERVIEW

1. Project background and description

With the increasing need for task management in daily life, web applications play an important role in organizing work efficiently. This project is developed using Flask, a lightweight Python web framework. It allows users to add, edit, delete, and manage tasks with additional features like priority levels and categories. The application provides a clean and user-friendly interface using Bootstrap.

2. Project scope

This project can be extended by adding advanced features like user authentication, database integration, reminders, and task scheduling. It can be used in real-world applications for personal and professional task management.

3. Objective

To develop a simple and interactive web application using Flask that allows users to manage their daily tasks efficiently.

4. Features

- *Add, edit, and delete tasks*
- *Mark tasks as completed*
- *Assign priority levels (High, Medium, Low)*
- *Categorize tasks (Work, Personal, Other)*
- *Priority-based task sorting*
- *User-friendly interface using Bootstrap*

5. Tools & Technologies Used

- Python
- Flask
- HTML
- Bootstrap

6. Steps Performed

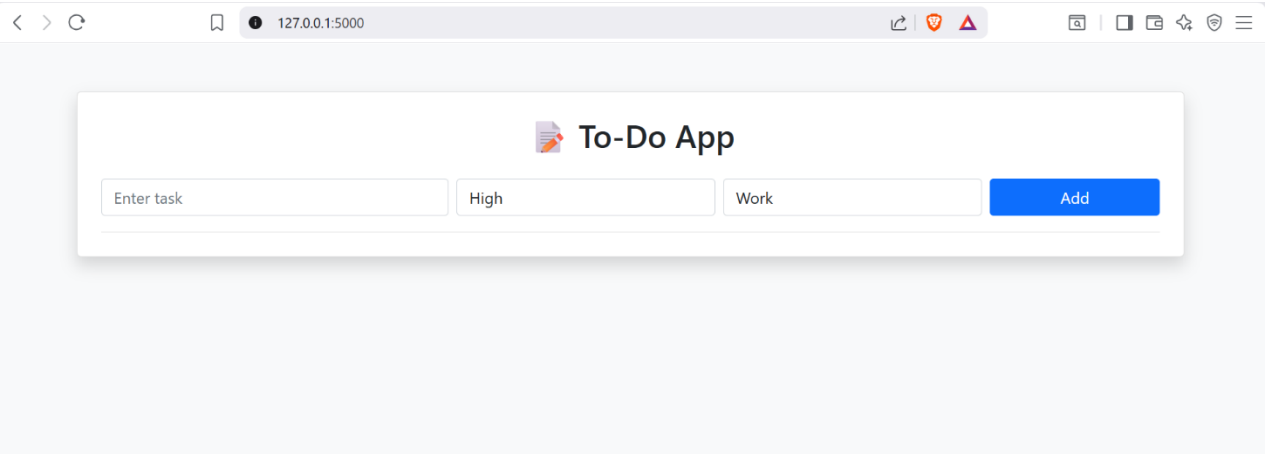
- Created Flask application and defined routes
- Designed user interface using HTML and Bootstrap
- Implemented task management features (Add, Edit, Delete)
- Added priority and category functionality
- Implemented task completion feature
- Applied sorting logic based on priority
- Tested the application locally

7. Deliverables

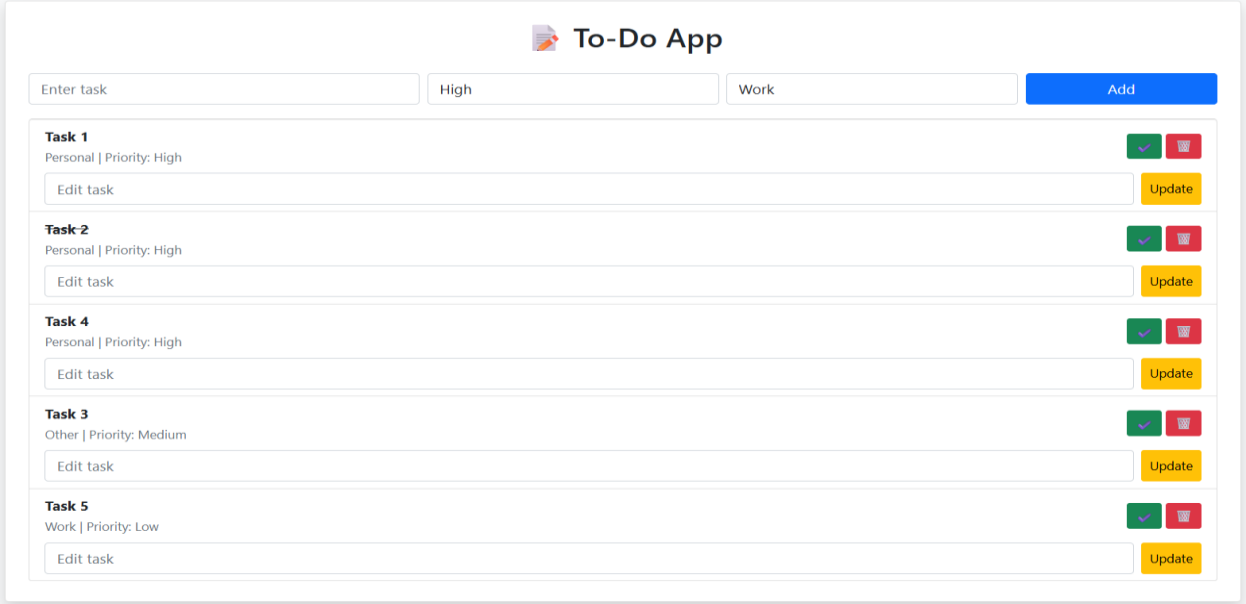
- Flask application source code
- HTML templates
- Screenshots of application output
- Project documentation

OUTPUT SCREENSHOTS:

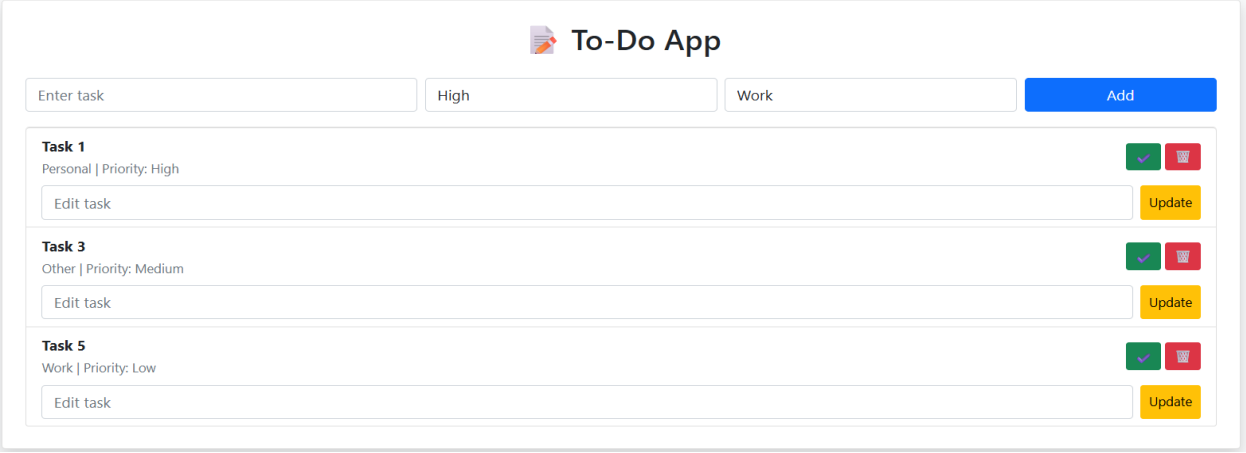
First UI



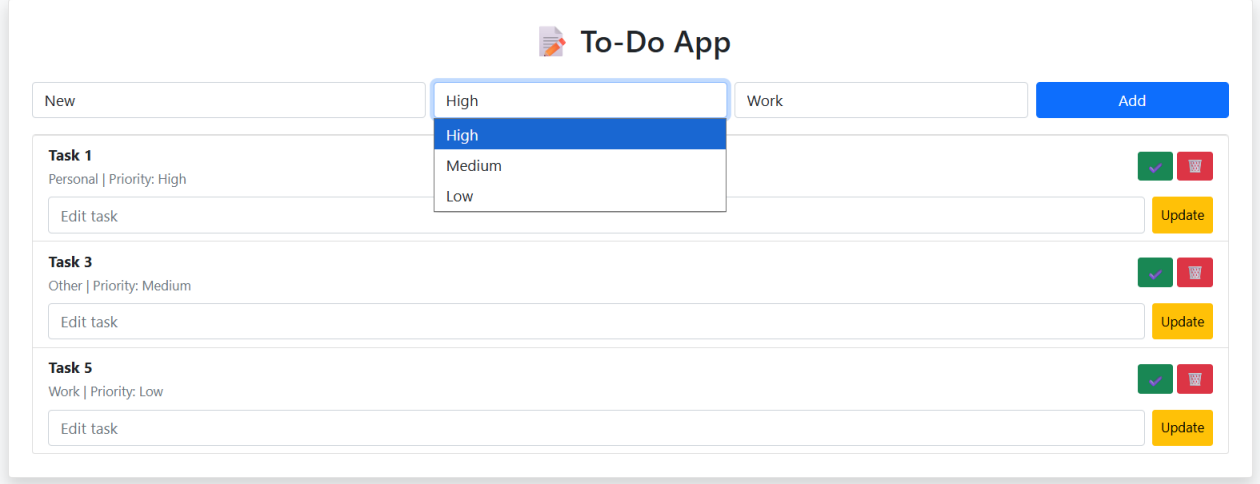
After adding tasks to the list



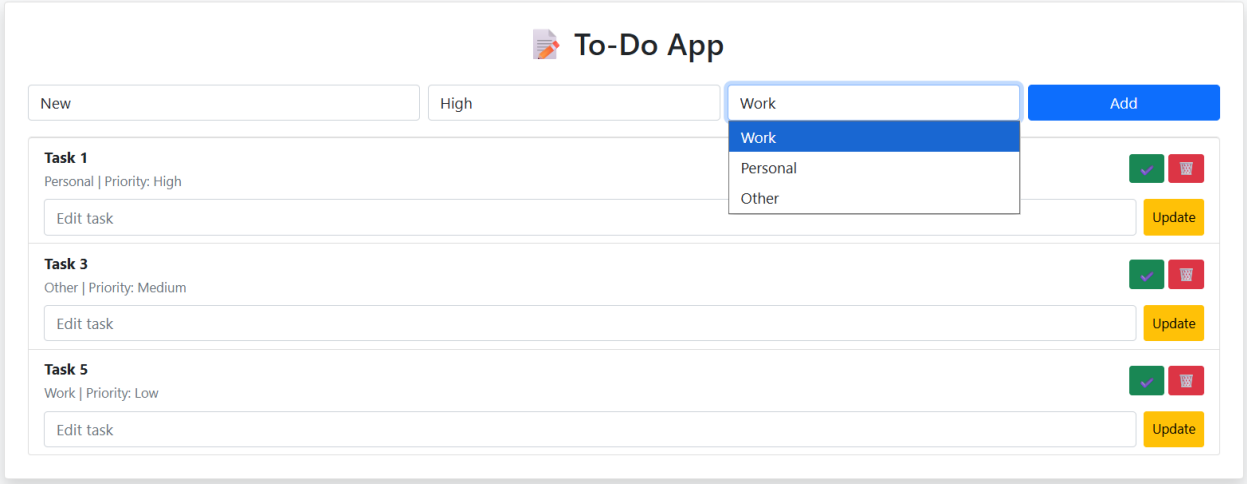
After deletion of completed tasks



Assigning priorities to tasks



Adding tasks according to the category of work



8. Conclusion

This project demonstrates the development of a web application using Flask. It successfully implements task management features along with a clean user interface. The project highlights how web technologies can be used to build simple and useful real-world applications.

9. How to Run the Project

1. Install Flask using pip install flask
2. Run python app.py
3. Open browser at http://127.0.0.1:5000
